My name is Kyle Zhang (http://RiptideStar.com), an undergraduate at UPenn's most competitive  Management & Technology program. I thrive in an environment filled with the most brilliant and "catching" minds, whose passions are infectious and light up the room. For 5 months last summer, I interned at a hedge fund, WaterValley, where we traded precious metals, like copper and bronze. Even with little prior experience of the metal industry, I adapted quickly, fitted in and contributed to the team, and made life-long connections. I am a superb fast-learner, and a team player with a very strong mathematical, inductive, and technical background. Before joining Wharton, I already created a few tech entities, LineupsValorant.com and a covid-19 vaccine finder with thousands of daily active users till today. Also I am currently the program director of DECODE(http://DECODE.build), working closely with my team at UC Berkeley and Stanford to organize the DECODE Innovation and Technology conference this November. Right now, I am serving as an advisory board member for Wharton Undergraduate Founders and Funders Association and on the Wharton Hedge Fund Club Quant Macro Team.

Driven by my passion and abilities, I believe I can fit in and contribute to your team quickly.
